MILES MACADAM
CONSTRUCTION & SURFACING

FLETCHER STREET, BOLTON

Details: 3,544m² of Milepave Ultra™ PMB

Contract Date and Duration: Mar 2026, Restricted working under phased closures and temporary traffic lights

EXISTING ISSUES WITH SITE

The carriageway and junction were severely deteriorated, with potholes, rutting, deformation, joint failures and aggregate loss.

SITE DETAILS AND USAGE

It is a busy local route through Bolton, serving surrounding residential communities and businesses and connecting with the wider road network. The scheme includes a high-stress junction subject to frequent sheer turning forces from HGV and bus traffic. The works also connect to a section resurfaced by Miles Macadam with Milepave™ in 2013. More than a decade later, the original surfacing remains in excellent condition, demonstrating its long-term performance on the same carriageway.

MILEPAVE ULTRA™

BENEFITS OF UTILISING MILEPAVE ULTRA™

Milepave Ultra™ PMB is designed for high-stress routes and junctions where strength and durability are critical. The polymer-modified binder (PMB) enhances resistance to deformation, rutting and wear, providing a robust surface capable of withstanding heavy traffic and repeated junction stresses. This delivers a durable carriageway under demanding conditions, particularly where sheer turning and braking forces are frequent, while helping extend service life and reduce maintenance.
